

| Code | Description | Size | Colour |
|-------|---|--------|-------------|
| 46203 | Mr Gorilla Moss & Mould Assault Concentrate "Industrial Strength" | 20ltrs | Pale yellow |

1. Description

Mr Gorilla Moss & Mould Assault is gentle on plants, deadly on moss and mould. A concentrated formula with a unique slow release formulation that works over time to kill moss and mould.

2. Characteristics

- Concentrated formula.
- Unique slow release formulation works over time to kill moss and mould.
- Protects surfaces all season long.

3. Technical Data

| | |
|----------------------------------|---|
| Appearance | Liquid |
| Volatile materials | 50% |
| Active Constituent: | 50% |
| pH | 8 |
| Specific gravity/density: | 0.98 g/ml |
| Coverage: | 300g/l* |
| | 1500m ² ground coverage (420 litres equivalent)* |

*Coverage is dependent on the surface, water pressure and application method.
For best results good quality hose fittings are recommended

4. Applications

Paths, roofs, brickwork and other hard surfaces, to remove mould algae, lichen and moss.

6. Shelf Life

12 months if stored in cool, dry place in original condition, unopened cartridges. Store in cool, dry conditions out of direct sunlight below 30°C and away from naked flame or source of heat.

7. Application Instructions

Surfaces

Preparation: Shake well before use. If using near plants and grass spray surroundings with water before and after use.

Application

Method: For best results apply on an overcast day with minimal wind and no rain expected for 12 hours.

Prior to Use: Shake well. If using near plants and grass, spray surroundings with water before use

To Apply: Dilute as per mixing ratio of 20:1, spray product onto surface with either a regular garden sprayer or knapsack thoroughly, if needed agitate surface with a medium bristle broom. Then let nature take over. The weathering process will gently remove the decomposing material without scouring the surface it has infested.

After Application: Rinse any plants or grass that may have come into contact with product, with water.

Please Note: Following treatment, black mould and mildew may turn orange in colour, this will be washed away in time after sufficient rainfall. Stubborn stains may take 3-12 months to be fully removed. Vertical areas

and areas not fully exposed to rainfall may require subsequent applications or assistance to encourage cleaning.

8. Health and Safety Recommendation

- **Keep children and pets of surface until dry.**
- Apply the usual industrial hygiene.
- For more detailed information, please refer to the SDS.

Remark

The directives contained in this documentation are the result of our experiments and of our experience and have been submitted in good faith. Because of the diversity of the materials and substrates and the great number of possible applications which are out of our control, we cannot accept any responsibility for the results obtained. In every case it is recommended to carry out preliminary experiments.

If any clarification is required, please contact Holdfast Technical Services or email sales@holdfast.co.nz.
